

DataStax HealthCheck

Data Sheet

DataStax Enterprise HealthCheck keeps you on track

HealthChecks provide a customized evaluation of your environment, incorporating several key components:

- Data Model Review
- Operations Review
 - Disk Configuration
 - JVM Heap Size
 - Memory
 - Network Throughput
- Application/Development Review
 - Concurrency
 - Consistency Levels for Reads/Writes
 - Security

DataStax Enterprise HealthChecks are provided free of charge to help ensure that your development goes smoothly and that when you put your application into production, you know that it is fully optimized. At the end of the HealthCheck, we will provide a list of recommendations to improve or scale your deployment.

To make the HealthCheck most productive, we recommend that the following people from your team participate in the process:

- Application Developers using Cassandra
- Operations people responsible for managing the cluster
- Data Modelers

HealthChecks only require 2-4 hours to complete. Please email us today at customercare@datastax.com to schedule your HealthCheck.
